

HOCKEY two-sided bus shelter made of steel.

The WHC281.00 model consists of two two-sided modules, has two benches with wooden seats, a water drainage system and walls filled with safety glass with the possibility of screen printing.

A wide range of additional equipment includes information totems, info kiosks, induction chargers, lanterns, litter bins and a power system based on photovoltaics.

The compact and modular structure of the shelters from the HOCKEY collection is perfect for platforms and bus stops. The lighting and small architecture products complementing the collection create a complete and reliable solution for the transfer infrastructure.
