

INTELI bus shelter made of steel.

The WIT071.00 model consists of two modules, has a bench with wooden seat, a water drainage system and walls filled with safety glass with the possibility of screen printing.

A wide range of additional equipment includes information totems, info kiosks, induction chargers, lanterns, litter bins and a power system based on photovoltaics.

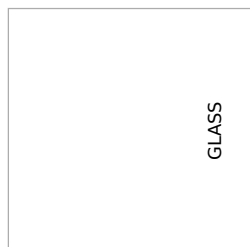

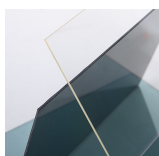

INTELI is a collection of one of the most modern shelters in the world. The modular design allows for individual configuration, and a long list of additional equipment makes INTELI a good choice for most projects.
